HOW WATCHES ARE MADE.

In a SOLID GOLD WATCH, aside from the necessary thickness for engraving and polishing, a large proportion of metal is needed only to stiffen and hold the engraved portions in place, and supply strength. The surplus gold is actually needless. In James Boss' Patent Gold Watch Cases this WASTE is saved, and solipity and STRENGTH increased by a simple process, at one-half the cost. A plate of solid GOLD is soldered on each side of a plate of hard nickel composition metal, and the three are then passed between polished steel rollers. From this the cases, backs, centers, bezels, etc., are cut and shaped by dies and formers. The gold is thick enough to admit of all kinds of chasing, be closed out at cost. engraving and engine turning. These cases have been worn perfectly smooth by | Cornices. Also use without removing the gold. This is the only case made under this process. Each case is accompanied with a valid guarantes signed by the manufacturers warranting it to meur 20 years. 150,000 of these Cases now carried in the United States and the Lowest. Canada.
